EDUCATION

Stony Brook University

Stony Brook, NY

Mathematics coursework, 3.6 GPA — withdrew to build software full-time

2024 – 2025

Ardsley High School

Ardsley, NY

3.9 GPA - 1510 SAT - 5's on 7/8 AP Exams - AP Scholar with Distinction

PROJECTS

Wingmate | [App Store](#) | wingmate.live

March 2026 – Present

- Built and shipped a social app for the cold-approach community to the App Store and Google Play, growing it to 170+ members and \$250+ in subscription revenue before making it free — field-report feed, city-based wingman matching, live member map, and a member-run coaching marketplace.
- Shipped iOS, Android, and web from one Next.js codebase (42K LOC, 78 API routes, 1,200+ commits) using Capacitor shells that load the hosted bundle, so most releases go out on a git push with no store review; only native surfaces (WidgetKit widget, entitlements, push permissions) require a rebuild.
- Automated the full iOS release pipeline in GitHub Actions — building, signing the app and widget extension against App Store Connect API-scripted provisioning, uploading, and submitting for review — enabling one-click releases developed entirely on Windows with no Mac in the loop.
- Built the real-time social layer on Neon Postgres and Firebase Cloud Messaging (FCM → APNs): threaded comments with per-item likes and view counts, DMs and city group chats, a shared unread-count store, and push for likes, replies, DMs, and wing requests.

Otto | cluely-delta.vercel.app

June 2026 – Present

- Built an always-on-top Windows desktop assistant (Electron) that reads whatever is on screen from one hotkey and either answers the question, walks the user through it, or operates the machine directly — all three in one thread, with no mode for the user to pick.
- Drove real OS input through a PowerShell host process (click, drag, scroll, type, key combos) with a guiding cursor on a click-through overlay. Each step declares the screen state that should follow, is re-verified against a fresh screenshot before the next runs, and retries up to three times rather than reporting false success.
- Ran push-to-talk transcription fully on-device via Whisper (transformers.js, CDN-imported at runtime — no extra API key, no installer cost) and served the UI from Vercel rather than bundling it, so shipping a change never means shipping a binary. Auto-updates via electron-updater; sessions persisted to Neon behind JWT auth.

Rabona | rabona.live

April 2026 – Present

- Built a friends-only social network — profiles, friend requests, posts, photo/video sharing, private messaging, pokes — where posts are visible only to mutual friends: no algorithmic feed, no follower counts, no public broadcast.
- Enforced every visibility and abuse rule in Postgres rather than the app layer: Supabase row-level security for friends-only reads and ownership-based mutations, per-user storage scoping, bot-pattern detection, and rate limiting across 20+ migrations.

Stonyloop | stonyloop.com

April 2026 – Present

- Built a Facebook-style social network exclusive to verified @stonybrook.edu students (profiles, wall posts, friends, pokes, direct messaging), grown to 50+ registered users.
- Designed a defense-in-depth model in Postgres Row-Level Security: email-gated signup, per-IP rate limiting and bot-pattern detection at the trigger level, owner-protection policies blocking privilege escalation, and notification-spam throttling.

Mathematics

Summer 2025

- Completed a Directed Reading Program in Algebraic Geometry under a Stony Brook graduate student mentor; attended the Nesin Mathematics Village (Şirince, Turkey) for advanced courses in Graph Theory, Number Theory, and Quadratic Fields.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL (Postgres), Python, HTML/CSS

Frameworks & Platforms: React, Next.js, Node.js, Electron, Capacitor, Supabase, Neon, Firebase

APIs & AI: Claude API, OpenAI API, Vercel AI SDK, Stripe, RevenueCat, Whisper (transformers.js)

Tools: Git, GitHub Actions, Fastlane, App Store Connect API, Vercel, PostHog, Claude Code
