EDUCATION

Stony Brook University

Mathematics coursework, 3.6 GPA — withdrew to build software full-time

Stony Brook, NY

2024 – 2025

Ardsley High School

3.9 GPA - 1510 SAT - 5's on 7/8 AP Exams - AP Scholar with Distinction

Ardsley, NY

PROJECTS

Tarrow | tarrow.vercel.app

September 2026 – Present

- Built a personal AI agent (“Claude Code for your life”) for web, iOS, and Android that interviews users into long-term memory, then researches, drafts messages, and runs approval-gated routines.
- Designed a durable run engine for 45-minute tasks on 300-second serverless functions: Postgres-backed runs advanced by chained, lease-based workers with crash recovery, SSE streaming, and parallel sub-agents.
- Routed inference across open-weight models (GLM → DeepSeek → Groq) with rate-limit-aware retries; shipped Sign in with Apple, APNs push, and voice input, with iOS/Android builds signed in CI.

Wingmate | [App Store](https://appstore.com) | wingmate.live

March 2026 – Present

- Built and shipped a community app for cold approachers to the App Store and Google Play, growing it organically to 200+ members and \$250+ in subscription revenue before going free — community chat, field reports, and city-based wingman matching.
- Shipped iOS, Android, and web from one Next.js codebase (42K LOC, 78 API routes, 1,200+ commits) via Capacitor shells that load the hosted bundle, so most releases go out on a git push with no store review.
- Automated iOS builds, signing, upload, and review submission in GitHub Actions with App Store Connect API-scripted provisioning — one-click releases developed entirely on Windows with no Mac.
- Built the real-time layer on Neon Postgres and FCM → APNs: threaded comments, likes, DMs, city group chats, a shared unread-count store, and push for replies, DMs, and wing requests.

Otto | cluely-delta.vercel.app

June 2026 – Present

- Built an always-on-top Windows desktop assistant (Electron) that reads whatever is on screen from one hotkey and either answers the question, walks the user through it, or operates the machine directly, all in one thread.
- Drove real OS input (click, drag, scroll, type) through a PowerShell host with a guiding cursor overlay; each step is re-verified against a fresh screenshot and retried rather than reporting false success.
- Ran push-to-talk transcription on-device via Whisper (transformers.js) and served the UI from Vercel instead of bundling it, so shipping a change never means shipping a binary; auto-updates via electron-updater.

Rabona | rabona.live

April 2026 – Present

- Built a friends-only social network — profiles, friend requests, posts, photo/video sharing, private messaging, pokes — where posts are visible only to mutual friends: no algorithmic feed, no follower counts, no public broadcast.
- Enforced every visibility and abuse rule in Postgres, not the app layer: Supabase row-level security, per-user storage scoping, bot-pattern detection, and rate limiting across 20+ migrations.

Stonyloop | stonyloop.com

April 2026 – Present

- Built a Facebook-style network for verified @stonybrook.edu students (50+ users), secured with Postgres RLS: email-gated signup, trigger-level rate limiting and bot detection, and privilege-escalation guards.

Mathematics

Summer 2025

- Directed Reading Program in Algebraic Geometry (Stony Brook); Nesin Mathematics Village (Şirince, Turkey).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL (Postgres), Python, HTML/CSS

Frameworks & Platforms: React, Next.js, Node.js, Electron, Capacitor, Supabase, Neon, Firebase

APIs & AI: Claude API, OpenAI API, OpenRouter, Groq, Vercel AI SDK, Stripe, RevenueCat, Whisper

Tools: Git, GitHub Actions, Fastlane, App Store Connect API, Vercel, Playwright, PostHog, Claude Code
