SUMMARY

Full-stack engineer who ships AI products end to end. Built a personal AI agent with a durable run engine for 45-minute tasks, a job-application agent that indexes 350K+ roles and submits through a browser extension, and a cross-platform community app grown to 220+ users and \$300+ in subscription revenue.

EDUCATION

Stony Brook University

Mathematics coursework, 3.6 GPA; withdrew to build software full-time

Stony Brook, NY

2024 – 2025

Ardasley High School

3.9 GPA · 1510 SAT · 5s on 7 of 8 AP exams · AP Scholar with Distinction

Ardasley, NY

PROJECTS

Tarrow | tarrow.vercel.app

September 2026 – Present

- Built a personal AI agent (“Claude Code for your life”) for web, iOS, and Android that interviews users into long-term memory, then researches, drafts messages, and runs approval-gated routines; free and \$20/mo Pro tiers.
- Designed a durable run engine for 45-minute tasks on 300-second serverless functions: Postgres-backed runs advanced by chained, lease-based workers with crash recovery, SSE streaming, and parallel sub-agents.
- Cut inference cost ~85% by moving agent workloads from Claude Opus 5 (\$5/\$25 per 1M input/output tokens) to GLM 5.3 via OpenRouter (~\$0.88/\$2.97), with DeepSeek and Groq fallbacks and rate-limit-aware retries.

Understudy | getunderstudy.vercel.app

September 2026 – Present

- Built an AI job-search agent that finds roles, scores fit, tailors resumes, and submits applications only after approval through a Chrome extension; two-stage LLM matching via OpenRouter cost \$0.29 across 600+ calls.
- Indexed 350K+ open roles from 20K+ career pages by crawling 7 applicant-tracking-system APIs (Greenhouse, Workday, Ashby, Lever, and more) into one schema, with per-platform concurrency caps and closure detection.
- Enforced truthful resume tailoring in code: each rewritten bullet must cite source-resume line IDs, and any number missing from its cited sources reverts the bullet to the original.

Wingmate | wingmate.live | App Store & Google Play

March 2026 – Present

- Built and shipped Wingmate, a social app for people practicing cold approach, to the App Store and Google Play, growing it organically to 220+ users (69 monthly active) and \$300+ in subscription revenue before going free.
- Designed the core loop: a roster for logging approaches and missed chances, daily check-ins with streak home-screen widgets on iOS and Android, and a Claude-powered coach with AI roster insights (850+ user messages).
- Built the social layer: a community feed with posts, comments, and reactions; DMs and city group chats; and wingman finding by city and map pins, with mutual wing requests that auto-accept.
- Shipped iOS, Android, and web from one Next.js codebase (56K LOC, 94 API routes) via Capacitor, with one-click iOS releases from Windows through GitHub Actions and the App Store Connect API.

MATHEMATICS

Independent Study & Competition

Summer 2025

- Directed Reading Program in Algebraic Geometry, mentored by a Stony Brook graduate student (June–July 2025).
- Nesin Mathematics Village (Şirince, Turkey): advanced courses in Graph Theory, Number Theory, and Quadratic Fields (July 2025).
- Competed at the International Mathematics Competition in Sofia, Bulgaria (August 2025).
- Coursework: Introduction to Analysis, Advanced Linear Algebra, Differential Equations, Multivariable Calculus, Introduction to Advanced Mathematics.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL (Postgres), Python, HTML/CSS

Frameworks & Platforms: React, Next.js, Node.js, Capacitor, Chrome Extensions (MV3), Supabase, Neon, Firebase

APIs & AI: Claude API, OpenAI API, OpenRouter, Groq, Vercel AI SDK, Stripe, RevenueCat, Resend

Tools: Git, GitHub Actions, Fastlane, App Store Connect API, Vercel, Playwright, PostHog, Claude Code
